Digital Signage Software Development Kit

Easily create custom applications for your environment

Bespoke applications are inherent to Digital Signage video services. They provide the unique interface, management, and functionality needed for the diverse range of Digital Signage ecosystems. Amino's SDK gives technology providers the ability to create JavaScript, native or hybrid applications by developing against the Browser or AOSP APIs (or both).

Our SDK helps accelerate development. The SDK license & support agreement provides tools and expertise to help with custom software development, integration and ongoing developer support.

Features	Benefit
Access to knowledgebase, documentation and FAQs in Zendesk	**Collaterals include:** • Browser application API documentation • Java application API documentation • Sample code library • Pre-configured docker images • Sample zapper application including source code • Sample settings application including source code • Access to on-line application signing tools • Application builder user guide • Channel Builder user guide
